Dominika Kostecka gr 333

Zadanie 1

Oryginał:

Możemy zauważyć, że z obrazu została usunięta osoba widoczna na oryginale.

Zadanie 1.2

Wysłany przeze mnie:

Przerobiony przez koleżankę:

Możemy zauważyć, że została dokonana manipulacja na wodzie.

Zadanie 2

EikonaMark batch processing detection log.

Folder: C:\Users\dominika\Downloads\Watermarking\Zad2

Możemy zauważyć, że ciężko było programowi wykryć znak wodny na tym obrazie. Metody, które się powiodły to:

- filtr Gaussa
- filtr środkowy
- filtr FMLR
- usuwanie kolumn i wierszy

400_2.jpg – obraz o rozmiarze 400x257 z osadzonym najmocniejszym znakiem wodnym

Przy silniejszym znaku możemy zauważyć, że rotacja była w stanie wykryć znak wodny.

1200 1.jpg – obraz o rozmiarze 1200x771 z osadzonym najsłabszym znakiem wodnym

```

```

Tutaj zdecydowanie możemy zauważyć różnice w wykrywaniu znaku wodnego w porównaniu do wcześniejszych przykładów.

Wnioski:

- 1. Im większa rozdzielczość tym łatwiej wykryć znak wodny.
- 2. Przy małych rozdzielczościach siła znaku nie ma tak dużego wpływu na jego wykrycie.
- 3. Jeśli chcemy dobrze zabezpieczyć plik powinniśmy używać obraz w dużej rozdzielczości.

- 4. Metoda croppingu i liniowa nie działała w żadnym pliku.
- 5. Metoda Gaussa, filtru średniego, usuwania kolumn i wierszy działała w każdym przypadku.
- 6. Metoda rotacji była tylko skuteczna w przypadku małej rozdzielczości i silnego znaku wodnego.
